

IT Assessment - Roadmap for the Future

ARCLIGHT
SOLUTIONS

An IT assessment identifies all hardware components that make up your IT Network.

This assessment provides a benchmark of where you are today and key information needed to make the right financial and technological decisions for your future business needs.

SERVICE OFFERINGS:

- Asset inventory
- Rack elevations
- Cabling inventory
- Circuit inventory
- Power availability
- Rack space (used and available)
- Hardware support contracts

STAGE 1: INITIATION

Arclight works with you to launch the Initiation Phase, which includes gathering key business objectives that lay the groundwork for a successful IT assessment. As a team, we will create criteria and reporting parameters to measure the success of the assessment.

STAGE 2: PLANNING

During the Planning Phase, we will determine site priorities for assessments to take place. A clear and consolidated picture of what will be necessary during the execution phase takes shape at this stage. The project plan and schedule evolve into the master plan for execution.

STAGE 3: EXECUTION

The Execution Phase identifies and documents your physical environments, cabling, and circuit data per location. This information is input into multiple discovery tools that create a full scope of the IT environment.

STAGE 4: CLOSEOUT

During the Closeout Phase, we package all of the data collected and present it to the necessary IT organizations. This data is the book of truth for your operational team. As a team, we will look at long-term infrastructure optimization and technical debt replacement scheduling.
